AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the present application:

LISTING OF CLAIMS:

Claims 1 to 22. (Canceled).

23. (New) A tripod joint for transmitting a driving torque between two driving elements of a drive train, comprising:

a joint inner part; and

a joint outer part holding the joint inner part, the joint inner part having a tripod star including ball bodies with pins, the ball bodies in each case mounted in a recess in a pressure body pivotable with respect to the pressure body, the pressure body and a rolling body configured to transmit the driving torque to the joint outer part, the recess in the pressure body including a cylindrical subregion, at least one guide ring inserted into the pressure body in a region of a cylindrical subregion, a ball body supported with respect to the pressure body via the guide ring.

24. (New) The tripod joint according to claim 23, wherein the recess includes a subregion corresponding to a cutout from a hemisphere and a cylindrical subregion, a guide ring arranged in the cylindrical subregion.

25. (New) The tripod joint according to claim 23, wherein the recess includes a cylindrical hole, two spaced apart guide rings inserted into the cylindrical hole.

26. (New) The tripod joint according to claim 23, wherein the cylindrical subregion includes grooves, the guide rings inserted into the grooves.

27. (New) A tripod joint for transmitting a driving torque between two driving elements of a drive train, comprising:

a joint inner part; and

a joint outer part holding the joint inner part, the joint inner part having a tripod star including ball bodies with pins, the ball bodies in each case mounted within a

cylinderical region enclosed by an inner ring and pivotable with respect to the inner ring, the inner ring and a rolling body configured to transmit the driving torque to the joint outer part, at least one guide ring inserted into the cylindrical region enclosed by the inner ring, a ball body supported with respect to the inner ring via the guide ring.
